-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nanba 5,949,161 in view of Japanese reference 62-166764. (A translation of the Japanese reference will be supplied in the next office action.) Nanba discloses a uniaxial drive unit having a fixed part of a rod shaped magnet 11 and a ring shaped moving part 21 with coils but does not disclose a winding motion transmission member for a driving section slidable in the axial direction. Japanese reference '764 teaches a driving section (balance weight) 16 for reducing vibration in OA (office automation) equipment with winding transmission member 14 and winding transmission support member 13.

In regard to claims 2-4, the English language abstract of Japanese reference '764 says "a counter weight 16 equal to that of the mover."

In regard to claim 5, see Japanese reference figure 1.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nanba in view of Japanese reference '764 as applied to claim 1 above, and further in view of Naoi et al. 6,367,159 B1. Nanba as modified by Japanese reference '764 teaches the drive unit but does not disclose using it to measure the surface shape of an object. Naoi et al. teaches using a small, precise linear motor to measure the surface of an object with sliders moving linearly along guide shafts. Since Naoi et al. and Nanba as modified by Japanese reference '764 are from the same field of endeavor it would have been obvious at the time the invention was made for one of ordinary skill in the art to have utilized a linear motor with a counter weight for reducing vibration of the

system and to thus improve the accuracy of measurement, thereby improving the quality of the wafers being produced.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Judson H. Jones whose telephone number is 571-272-2025. The examiner can normally be reached on 8-4:30 M-F.
